PROFESSIONAL SUMMARY

Front-end and mobile developer with 5 years of commercial experience delivering production web and mobile applications in React, Next.js, React Native and TypeScript. Currently building and quality-assuring AI/LLM features at Superparent, an AI-powered family organisation platform. Previously spent four years at Britehouse Mobility delivering websites and applications for major South African brands, including MWEB, Webafrica, SuperSport, AECI and Grindrod, across telecoms, sports media, chemicals and logistics. Promoted from junior to intermediate on the strength of feature ownership, with a track record of improving performance and code quality, mentoring junior developers and shipping on schedule in Agile teams. Holds a BCom Honours in Information Systems and a cum laude Advanced Diploma in IT.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), HTML5, CSS3

Front End: React.js, Next.js, Tailwind CSS, responsive design, cross-browser compatibility

Mobile: React Native, Expo, iOS and Android builds

AI & LLM: LLM integration and configuration, deterministic LLM programming, AI output quality assurance

Back End & Cloud: REST APIs, Convex, Clerk authentication, AWS Serverless

Practices & Tools: Git, pull-request code reviews, Agile/Scrum, production QA, performance optimisation, refactoring, mentoring

PROFESSIONAL EXPERIENCE

Intermediate Software Developer Jan 2026 – Present

Superparent · AI-powered family organisation platform

Superparent is an AI assistant for parents that turns school emails, WhatsApp messages, PDFs and photos of flyers into one shared family calendar, to-do list and set of reminders.

- Build and maintain the production web and mobile applications with React.js, Next.js, React Native, TypeScript and Tailwind CSS.
- Integrate and configure AI/LLM solutions in production, supporting the assistant that extracts dates, deadlines and tasks from messages and documents and turns them into calendar events, to-dos and reminders.
- Run production quality checks on the AI assistant, comparing incoming WhatsApp messages and emails against what was saved in the app, classifying mistakes such as duplicates, wrong dates and misread requests, and reporting the error rate over time.
- Turn QA findings into fixes: correct affected family data and feed issues into development rounds that are shipped through reviewed pull requests.
- Test calendar synchronisation, audit error handling and review UI flows to improve reliability and the user experience.
- Partner with product and design to take features from requirements through to release in a small, fast-moving start-up team.

Intermediate Software Developer Dec 2024 – Dec 2025

Britehouse Mobility · The Campus, Sandton, Johannesburg

Britehouse Mobility designs, builds and maintains custom software, web and mobile solutions for enterprise clients.

- Delivered web and mobile features for enterprise client projects using React, Next.js and React Native.
- Developed and maintained client websites for well-known South African brands (see client projects below).
- Improved application performance and code quality through targeted refactoring and code reviews.
- Mentored junior developers through pairing sessions and hands-on technical guidance.

Junior Software Developer Oct 2021 – Dec 2024

Britehouse Mobility · The Campus, Sandton, Johannesburg

- Built and maintained front-end and mobile application features in an Agile, cross-functional team.
- Contributed front-end development to client websites across telecoms, sports media, chemicals and logistics.
- Collaborated with back-end developers, testers and designers to deliver releases on schedule.
- Earned promotion to Intermediate Developer by taking increasing ownership of features and modules.

Client projects at Britehouse Mobility (2021 – 2025)

- **MWEB:** website for one of South Africa's best-known internet service providers.
- **Webafrica:** website for a national fibre and LTE internet service provider.
- **SuperSport:** website for the pan-African sports broadcaster.
- **AECI:** corporate website for the JSE-listed chemicals and mining explosives group.
- **Grindrod:** corporate website for the JSE-listed freight logistics and ports group.

EARLIER EXPERIENCE

Lecturer's Assistant Jan 2021 – Nov 2021
Central University of Technology, Free State

- Supported lecturers on IT modules through marking, tutorials and student consultations.

Computer Lab Assistant Mar 2020 – Dec 2020
Central University of Technology, Free State

- Provided technical support to students and kept computer lab systems running.

Technical Programming Lab Assistant Feb 2017 – Jan 2019
Central University of Technology, Free State

- Coached students through programming practicals, debugging and core programming concepts.

EDUCATION

BCom Honours in Information Systems 2022
University of Johannesburg · Focus: Computer and Information Systems Security / Information Assurance

Advanced Diploma in Information Technology (Cum Laude) 2020 – 2021
Central University of Technology, Free State

Diploma in Information Technology 2016 – 2019
Central University of Technology, Free State
